

## BÖLÜM 17

### MİDENİN MALIGN TÜMÖRLERİ

Mustafa YENİ<sup>1</sup>

#### 1. GİRİŞ

Mide kanserleri çoğunlukla geç belirti vermesi ve hastalığa özgü semptomlarının olmaması nedeniyle sinsi ilerleyen bir hastaliktır. Mide de görülen tümörlerinin %90-95'i maligndir, bu malign tümörlerin %95'e yakın kısmını adenokarsinom, %4'ini lenfoma, %1'ini ise malign mezenkimal tümörler oluşturmaktadır (1). Diğer nadir tümörler ise karsinoidler, anjiosarkom, karsinokarsinom ve yassı hücreli karsinomdur. Mideye metastaz hematojen yol ile nadiren örneğin melanoma veya meme gibi diğer bölgelerden olur. Daha sıklıkla komşu organların malign tümörleri direk olarak (örneğin pankreas veya kolon) veya peritoneal implantasyon yoluyla (örneğin over) invaze eder.

#### 2. EPİDEMİYOLOJİ

Mide kanseri tüm dünyada önemli bir sağlık sorunudur. Kanser İstatistikleri 2020 raporuna göre 27.600 yeni mide kanseri vakası görüleceği düşünülmektedir. Ayrıca ABD'de mide kanseri nedeniyle 11.010 kişinin öleceği tahmin edilmektedir. Globocan 2020'ye göre ise mide kanseri, 2020 yılında her iki cinsiyetten yeni
