ACKNOWLEDGEMENTS

I am deeply indebted to my adviser, Dr John A. Fazey for the unwavering encouragement he has extended to me during my doctorate program. Indeed, without his support and courage this dissertation would not have been written. Specially thanks are also extended to Professor Lew Hardy, and Dr David Markland for their valuable assistance and to Mrs Della Fazey for her quiet confidence in my efforts and ability. I also thank Professor Iolo Williams for his advice and encouragement.

I owe a huge debt of gratitude to my wife, Betül. I express my heartfelt appreciation for her faith in me and for her patience. I thank my lovely children, Zeynep and Emre for their understanding my frequent absences.

DEDICATION

This thesis is dedicated to my parents whose support and love have always carried me through.
