

# CHAPTER 11

## SURGERY FOR CAROTID ARTERY DISEASE

Nöfel Ahmet BiNiCiER<sup>1</sup>

Serdar BADEM<sup>2</sup>

### INTRODUCTION

Carotid artery stenosis is a common cardiovascular disease and an important health problem. Among individuals over 60 years of age, its incidence may reach 8% and it can be asymptomatic (1). Atherosclerosis in the carotid arteries is an important and preventable cause of cerebrovascular events and secondary mortality or morbidity (2).

### Symptoms

The following may be observed due to atherosclerosis of the carotid arteries and plaques:

- Transient unilateral vision loss (Amaurosis fugax)
- Transient ischemic attack (TIA) lasting less than 24 hours without acute infarction
- Stroke that causes death due to a neurological deficit in the first 24 hours or one which lasts longer than 24 hours
