AMFETAMİNLER VE AMFETAMİN BENZERİ UYARICILAR

Tarihçe

Ephedra, 5000 yılı aşkın zamanda geleneksel Çin tıbbında kullanılan ve Ma-huang olarak adlandırılan *Ephedra sinica* bitkisinden elde edilir. 1885 yılında epedrada bulunan aktif alkaloid olan efedrin üretilmiştir. Sentetik bir efedrin olan amfetamin ve metamfetamin, merkezi sinir stimülasyonu, bronkodilatasyon veya nazal vazokonstriksiyon gibi farmasötik amaçlarla efedrinden geliştirildi (1).

Sentetik uyarıcıların ilki olan amfetamin 1887'de izole edilmiştir. İlk olarak 1930'larda amfetamin fenilizopropilamin içeren ve reçetesiz satılan nazal dekonjestan (Bezedrine inhaler) olarak popüler hale geldi. Ardından yorgunluk, narcolepsi ve depresyon gibi klinik uygulamalarda kullanılmaya başlandı (2). Kolay erişilmesi ve popüleritesinin artması yanlış kullanımlara yol açtılarından 1957'de reçetesiz (tezgahüstü) ilaç kullanımı yasaklandı.

Metamfetamin 1919'da izole edildi. Metamfetamin kullanımı 1960'ların sonlarına doğru zirveye ulaştı. 1971'de yasal düzenlemelerle amfetamin ve metamfetaminin popüleritesi bir süreliğine azaldı. İkinci dünya savaşında uzun süre uyenik kalmak için reçeteli suistimal edilen metamfetamin veya amfetamin kul-
