## ATOPİK DERMATİTTE TOPİKAL VE SİSTEMİK TEDAVİLER

Derya ÜSTÜN EROĞLU<sup>1</sup>

### TOPİKAL TEDAVİLER

Atopik dermatit (AD) patogenezinde epidermis ve epidermal bariyer önemli rol oynadığı için topikal tedaviler önemli yer tutar. AD tedavisinde tam kür sağlanamaması nedeniyle, tedavide asıl amaç atakların ve semptomların baskılanması, hastalığın uzun süreli kontrol altına alınmasıdır.(1)

AD'nin topikal tedavisi temel olarak üç ana grupta toplanabilir; bariyer fonksiyonunun güçlendirilmesi, enflamasyonun kontrol altına alınması, Stafilocok kolonizasyonunun tedavisidir. AD tedavisinde en önemli basamak bozulan epidermal bariyerin güçlendirilmesi ve temel bulgu olan kserozisin giderilmesidir.(2)

Sonuç olarak, AD'de topikal tedaviye yanıt alınamadığı durumlarda sistemik tedavi ile birlikte uygulanması önerilmektedir.
