

## ◆ *Gelecek Bize Ne Vaad Ediyor?*

*Dr. Yunus Emre KIZILKAN*

*Doç. Dr. Ömer YILMAZ*

Üriner sistem taş hastalığı, özellikle bazı coğrafyalarda sık görülen ve prevalansı da gittikçe artan bir hastalık (Scales ve ark. 2012). Hızla ilerleyen teknolojinin etkisi ile uzun yıllar boyunca etkin ve minimal invazif cerrahini arayışçı içindeki endoürologların kullandığı aletler boyut olarak küçülmüş, optik ve fonksiyonel kapasiteleri artmıştır (Scotland ve ark. 2017; Huusmann ve ark. 2017). 1964'te V. Marshall ilkел bir fleksible fiberoskopu (fURS) kullanmasından günümüze kadar teknolojideki ilerleme, görüntüleme sistemlerinin gelişmesi ve deneyimin giderek artması fleksible üreterorenoskopu üst üriner sistem taş ve tümörlerinde etkin ve öncelikli tedavi seçenekleri arasına koymuştur (Marshall 1964; Turk ve ark. 2016; Assimos ve ark. 2016; Kuroda ve ark. 2016).

Minimal invazif doğası ve teknolojik gelişime açık olması fURS'yi günümüzde olduğu gibi gelecekte de popüler teknikler arasında tutacaktır. Bu nedenle RIRC'in eksikliklerini ve yetersizliklerini bilmek, bu cerrahide kullanılan aletlerin geliştirilmesi açısından önemlidir. RIRC; fURS dışında üreteral erişim kılıfı (ÜEK), kılavuz tel, üreteral stent, balon dilatör, irrigasyon pompası, lazer probu ve cihazı, basket kateter, yabancı cisim forsepsi, J-J stent gibi kombiné cihaz ve malzemelerin kullanıldığı bir sistemdir. Başarı için sistemi oluşturan tüm parçaların sürekli gelişimi amaçlanmaktadır. Cerrahının başarısını ve cerrahın ergonomisini artırmanın yanı sıra olası komplikasyonları azaltmak için de sadece fURS'nin değil bu yardımcı aletlerin geliştirilmeye ihtiyacı vardır.

Fleksible üreteroskop boyutları gün geçtikçe küçülüyor ve ergonomisi artırılmaktadır. Çalışma kanal çaplarının beraberinde daralması minyatürize edilmiş yardımcı ekipmanlara olan ihtiyacı artırmaktadır. Gelişen teknoloji cihaz ve
