

# 9. BÖLÜM

## VASKÜLER KÖKENLİ TÜMÖR HAYVAN MODELLERİ

Kadir Burhan KARADEM<sup>1</sup>

Kan damarlarının tümörleri; benign hemanjiyomlar, nadir metastaz yapan lokal agresif tümörler ve malign anjiyosarkomlardır. Histopatolojik sınıflandırmada tümör benzeri durumlar olarak ortaya çıkabilen basiller anjiyomatозisde nonneoplastik malformasyonlar grubunda yer alır (1) (Tablo 1).

**Tablo 1: Vasküler tümörlerin sınıflandırılması**

### **Bening Tümörler**

Kapiller Hemanjiyom  
Kavernöz Hemanjiyom

### **Lenfanjiyom**

Basit (kapiller) lenfanjiyom  
Kavernöz lenfanjiyom (kistik higroma)

### **Glomus Tümörü**

Reaktif Vasküler Proliferasyonlar  
Basiller Anjiyomatозis

### **İntermediate tümörler**

Kaposi Sarkomu  
Hemanjiyoendotelyoma

### **Malign Tümörler**

Anjiyosarkom

Vasküler neoplazmlar, vasküler endotelden, bağ dokudan ve damarı çevreleyen dokudan (örn. glomus tümörü) kaynaklanmaktadır. Histolojik olarak
