

BÖLÜM 31

KUTANÖZ APOKRİN KARSİNOM

Vildan ELİBOL¹

GİRİŞ

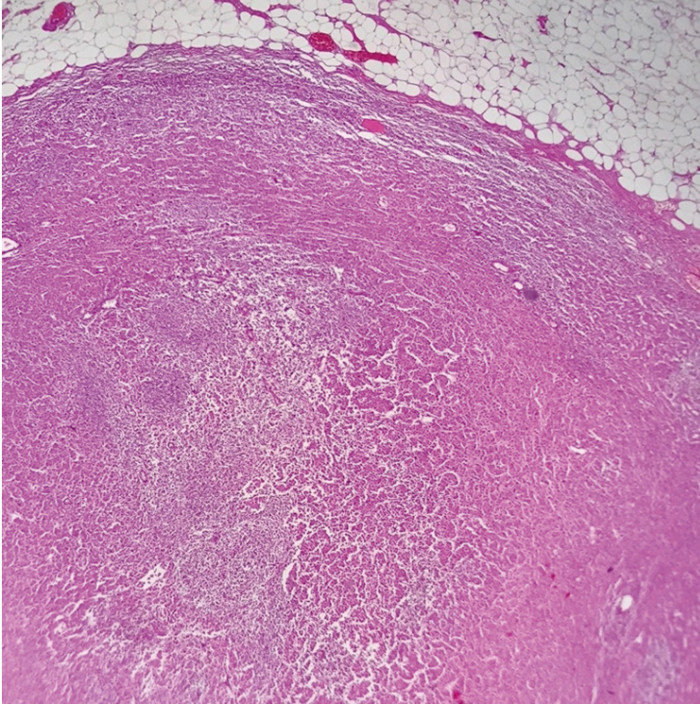

Apokrin glandların malign tümörleri olan kutanöz apokrin karsinomlar oldukça nadir deri eki tümörleridir (1–4). Modifiye apokrin glandları temsil eden moll glandları (5) ve seromusinoz glandların tümörlerini de bu grup içinde sayan kaynaklar bulunsa da (4,6,7) *DSÖ sınıflaması* bu grupları derinin apokrin karsinomları sınıflamasının dışında tutmaktadır (8).

KLİNİK BULGULAR

Aksilla; en çok olgunun bildirildiği lokalizasyon olmakla birlikte tümör, apokrin glandların bulunduğu birçok lokalizasyonda görülebilir (9,10). Baş, boyun (11), meme başı (12), vulva (13) ve anogenital (14) bölgede bildirilmiş olgular bulunmaktadır (15,16). Saçlı deride görülen bir olgu da nevus sebaceus zemininde gelişim göstermektedir (17).

Genellikle de novo olarak ortaya çıktıkları düşünülse de nadiren apokrin adenom ve apokrin hiperplazi zemininde gelişimleri de mevcuttur (15). Bilateral aksiller apokrin karsinomlu hastalarda bununla ilişkili apokrin hiperplazi bildirilmiştir
