ÖZEL YAŞ GRUPLARINDA MEME KANSERİ YÖNETİMİ

Hüseyin Özgür AYTAÇ¹

GİRİŞ

Günümüzde artan erken tanı olanakları ve giderek bireyselleşmekte olan meme kanseri tedavisi, genç yaşta konulan tanıların her geçen gün artıyor olması ve ileri yaş hastalarda ise tedavi basamaklarından sakınma eğilimindeki artış, bu iki yaş grubunu, genç ve ileri yaş hastaları daha farklı değerlendirmeyi gerekli kılmaktadır. Bu bölümde, genç ve ileri yaş hastalarının meme kanseri yönetimi ele alınmıştır.

GENÇ ERİŞKİNDE MEME KANSERİ

Meme kanseri yönetiminde birçok nedenden ötürü genç meme kanserlerinin yeri ayrıcalıklıdır. Bugün pek çok kılavuzun ortak görüşü 40 yaş altı hastaların genç yaş olarak ele alınması gerektiği şeklindedir. Bilindiği üzere meme kanseri yaşa bağlı bir hastalık ve ilerleyen yaşla birlikte görülmeye sıklığı artar [1]. Örneğin 30-39 yaş arası yıllık meme kanseri insidansı %0,04 iken bu oran 80 yaşına gelindiğinde %10'u aşmaktadır. Diğer bir ifadeyle, bugün için, 60-69 yaşları arasında her 25 kadından biri meme kanserine yakalanmaktadır, bu oran 30-39 yaşları arasında her 65 kadından biri şeklinde olmaktadır. Yani tüm meme kanseri tanılarının yaklaşık yarısını 50-69 yaşları arasındaki hastalar oluştururken, ancak %5 kadarını 40 yaşındaki ve sadece %2,5 kadarını 35 yaşındaki hastalar oluşturmaktadır [2-5]. Bu genç yaş grubu tüm meme kanserleri içinde az yer tutuyor olmasından ötürü çoğu kez klinik değerlendirmede hak ettiği farklı ve titiz
