

BÖLÜM 12

Vazoaktif İlaçlar

Sinem YALÇIN BAYRAKÇI¹

GİRİŞ

Vazokonstriksiyon yapıp, damar tonusu ve ortalama arter basıncını artıran ajanlara vazopresör ilaçlar denir (1). Kalbin kontraktilitesini artırarak kardiyak debiyi artıran ajanlara pozitif inotrop ilaçlar denir. Vazoaktif ajan, damar tonusu ve çapına etki eden, şok durumlarının yönetiminde kullanılan vazopresör ve inotropik aktiviteye sahip çeşitli farmakolojik ilaçları tanımlamak için kullanılan bir terimdir (2).

ETKİ MEKANİZMASI

Vazoaktif maddeler katekolamin veya katekolamin bazlı olmayan maddeler olarak da sınıflandırılabilir. KATEKOLAMİNLER, KARDİYOVASKÜLER MECANİZMLERİNİ ALFA-1 (α_1), BETA-1 (β_1), BETA-2 (β_2) VE DOPAMİNERJİK RESEPTÖRLERİN AGONİZMI YOLUYLA UYGULAYAN GENİS BİR ENDOJEN VE SENTETİK SEMPATOMİMETİK GRUBUNU KAPSAR. KATEKOLAMİN OLMAYAN AJANLAR ARASINDA VAZOPRESSİN RESEPTÖR AGONİSTLERİ, FOSFODİESTERAZ(PDE) İHİBITÖRLERİ, KALSIYUM DUYARLILAŞTIRICI AJANLAR, NİTRİK OKSİT İHİBE EDİCİ AJANLAR VE ANJIYOTENSİN II (ATII) YER ALIR (3) (TABLO 1).

ALFA ADRENERJİK RESEPTÖRLER

α_1 adrenerjik reseptörler vasküler duvardaki düz kas hücreleri üzerinde ve kalpte miyokard hücrelerinde bulunur. Uyarılması ile vazokonstriksiyon ve neticesinde

¹ Uzm. Dr., Dr. Ersin Arslan Eğitim ve Araştırma Hastanesi, Yoğun Bakım Kliniği, drsinembayrakci@gmail.com

SONUÇ

Vazopresörler, vazokonstriksiyona neden olan ve ortalama arter basıncını yükseltten güçlü bir ilaç sınıfıdır. Kritik hastalarda vazopressörlerin ve inotropik ajanların kullanımına ilişkin çeşitli tartışmalar mevcuttur. Coğu, farklı rejimlerle tedavi edilen benzer hasta popülasyonlarını karşılaştıran büyük ölçekli çalışmaların görece azlığından kaynaklanmaktadır. Başlangıç ajanı seçimi, şokun altında yatan şüpheli etyolojiye dayanmalıdır (örneğin, belirgin hipotansiyon olmaksızın kardiyojenik şok için dobutamin, septik ve kardiyojenik şok için hipotansiyon ile birlikte norepinefrin, anafilaktik şok için epinefrin). Vazopresör ilaçlar kullanılırken hastalar yakın olarak monitörize edilmeli, ilave olarak doku oksijenasyonu parametreleri de izlenmelidir. Tedavide asıl amaç hastanın kan basıncını yükseltmek değil, yeterli doku perfüzyonunu sağlamak olmalıdır.
