BİYOSENSÖRLER VE LATERAL AKIŞ (LFA) TESTLERİNİN MİKROBİYOLOJİK TANIDA KULLANIMI

Mustafa ALTINDİŞ¹

Aslıhan DEMİRCAN²

Biyosensörler Genel Bakış

Uluslararası Temel ve Uygulamalı Kimya Birliği (IUPAC) tanımına göre biyosensörler, biyolojik önem sahip bir biyomolekülün tespiti için biyomolekülün konsantrasyonuyla orantılı şekilde ölçülebilir bir sinyal oluşturmak üzere bir biyolojik ögeyi (biyo- algılayıcı bileşenler) bir fizikokimyasal bileşenle (biyodönüştürücü bileşen) birleştiren analitik cihazlardır^{1,2}. Bir biyosensörde temel amaç biyokimyasal bir sürecin elektriksel sinyale çevrilmesidir².

İnsanlık tarihinde, pandemik ve endemik salgınlar nedeniyle milyonlarca kişi hayatını kaybetmiştir. Bilimsel gelişmeler ve sağlık sistemlerindeki başarılarla rağmen salgın riskleri artarak devam etmektedir. Özellikle fekal-oral yolla bulanan bakteriyel ve viral salgınlar her yıl milyonlarca can almaktadır. Solunum yoluyla yayılan salgınlar -1918'de influenza, 2003'te Şiddetli Akut Solunum Sendromu [Severe Acute Respiratory Syndrome (SARS)], 2012'de Orta Doğu Solunum Sendromu [Middle East respiratory syndrome (MERS)] ve

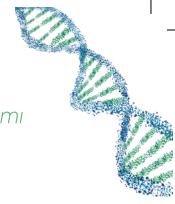

2019'da Coronavirus disease-19 (COVID-19) pandemileri- nedeniyle milyonlarca ölüm olmuştur²⁻⁴.

SARS-CoV-2 virüsünün neden olduğu COVID-19 Aralık 2019'da ortaya çıkışından bu yana hızla tüm dünyaya yayılmış, pandemiye dönüşmüştür. Pandemi sadece küresel sağlığı değil ülkelerin ekonomisini, sosyal istikrarını ve toplumun uygurlık sürecini önemli ölçüde etkilemiştir. Öncelikli olarak toplum sağlığını korumak ve iyileştirmek amacıyla hastalıkların zamanında tanımlanması ve müdahale edilmesi için yeni hasta-başı [point-of-care (POC)] teşhis yöntemleri geliştirmenin önemi giderek artmaktadır^{2,4-6}.

Bulaşıcı hastalıkların yönetiminde üç ana strateji vardır: Enfeksiyon kaynağının kontrolü, bulaş yollarının kesilmesi ve enfeksiyon açısından risk altında olan kişilerin korunması. Bu üç stratejiden erken tanı, erken izolasyon ve hasta bireylerin erken tedavisini gerektiren enfeksiyon kaynağının kontrolü için hassas, hızlı ve doğru tespit metotları ve cihazlarına ihtiyaç bulunmaktadır. Bulaşıcı has-
