

Alt Ekstremite Sinir Blokları

3

Sudhakar Subramani ve Sangini Punia

Çeviri: Dr. Kasım İlker İTAL

3.1 Giriş

Alt ekstremitede cerrahiyi kolaylaştırmanın yanısıra postoperatif analjeziyi sağlamak için zamanla birçok alt ekstremite blok teknikleri tanımlanmıştır. Alt ekstremite sinir blokları, ekstremite amputasyonu gereken hastalarda kronik ağrı gelişiminin önlenmesinde önemli bir rol oynayabilir [1]. Bununla beraber, alt ekstremite için reyjonal anestezi son derece güvenli olup, iyi tasarlanmış multimodal anestezi tekniğinin bir parçası olarak kullanıldığından daha iyi bir ağrı kontrolü sağladığı kanıtlanmıştır [2]. Kaynakların kısıtlı olduğu ortamlarda ve birden fazla ciddi komorbiditesi olan karmaşık hastalarda reyjonal anestezi teknikleri, endotrakeal entübasyonun komplikasyonlarını ve genel anestezinin kardiyak depresan etkilerini azaltmaya/ortadan kaldırmaya yardımcı olabilir. Bu bölümde alt ekstremite anatomisini ve inervasyonunu takiben proksimalden distale doğru sık kullanılan alt ekstremite sinir bloklarını tartışacağız (Tablo 3.1).

3.2 Alt Ekstremite Anatomisi ve İnervasyonu

Alt ekstremitenin anterioru lomber pleksus tarafından ve posterioru başlıca sakral pleksus tarafından inerve edilir. Alt ekstremitedeki sinir bloklarının daha iyi anlaşılmasını kolaylaştmak için belirgin sinirleri kısaca tanımlayacağız.
