Pankreatik Psödokistlerin Etiyolojisi ve Tedavisinde Fistül

Oğuzhan TAŞ¹

Pankreasın psödokisti, amilaz ve diğer pankreatikenzimlerden zengin, epitel ile döşeli olmayan fibröz doku duvarı ile çevrili lokalize bir sıvı topluluğudur. Kronik pankreatit ve daha az sıklıkla akut pankreatit öyküsü olan hastalarda sıklıkla spesifik olmayan semptomlarla kendini gösterir. İlişkili morbidite ve mortaliteyi en aza indirmek için ortaya çıkabilecek herhangi bir komplikasyonu belirlemek çok önemlidir. Atlanta sınıflandırmasına göre pankreatik sıvı koleksiyonlarının sınıflandırılması Şekil 1'de gösterilmiştir.

Şekil 1. Pankreatik Sıvı Koleksiyonları Atlanta Sınıflaması
