### GİRİŞ

Deliryum, herhangi bir fiziksel yada fizyopatolojik nedenden dolayı beynin bilisel işlevlerinin kısa sürede bozulması, bilinç durumunda değişiklik, dikkat, davranış ve oryantasyonda bozukluk, artmış ya da azalmış psikomotor aktivite ve uykú-uyanıklık döngüsünün düzensizliği ile karakterize, geçici organik mental bir sendromdur. Deliryum kelimesi Yunanca “saçma konuşmak” anlamına gelen “Leros” kelimesinden ve Latince “izin dışına çıkmak” anlamındaki “delirare” veya “delirare decedere” kelimelerinden köken almaktadır. Yıllarca organik beyin sendromu, akut konfüzyonel durum, konfüzyon, akut demans, akut beyin yetmezliği, metabolik ansefalopati, geri dönüşlü toksik psikoz ve yoğun bakım ünitesi psikozu gibi farklı terminolojiler ile anılan deliryum çoğu zaman tanınmamakta veya yanlış teşhis edilmektedir. Deliryum vakalarının %65’i acil servislerde
