

Bölüm 4

KONJENİTAL KALP HASTALIĞI İÇİN YENİDOĞAN NABİZ OKSİMETRE TARAMASI

Mahli Batuhan ÖZDOĞAR¹

Konjenital kalp hastalığı (KKH), yenidoğanlarda en sık görülen doğumsal hastalıktır (1,2). Yaşamın ilk yılında cerrahi veya kateterizasyonla müdahale gerektiren kritik KKH (KKKH), tüm KKH'ların yaklaşık %25'ini oluşturur (3). KKKH'lı birçok yenidoğan semptomatik olup doğumdan hemen sonra teşhis edilirken, bir kısmı da taburculuktan sonra tanı alır (4,5). Kritik kalp lezyonlu bebeklerde, teşhisin gecikmesi ve bu hastaların tedavisinde uzmanlık sahibi bir üçüncü basamak merkeze zamanında yönlendirilmemesi morbidite ve mortalite riskini arttırmır (6,7).

KKKH'nın erken tespiti için yenidoğan döneminde kullanılan en güvenilir yöntem nabız oksimetre taramasıdır (NOT).

1. TANIM VE HEDEFLENEN LEZYONLAR

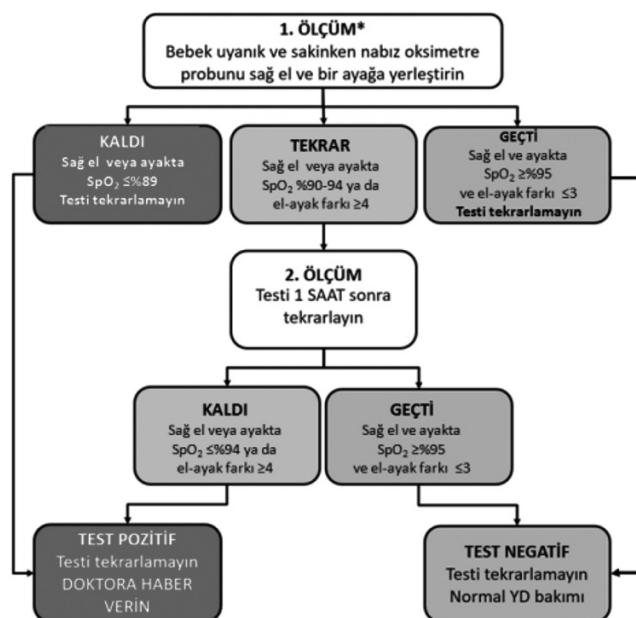

KKKH: İlk yaşta cerrahi veya kateterizasyonla müdahale gerektiren doğumsal kalp malformasyonlarıdır. Bu kategoride, duktal bağımlı ve siyanotik lezyonların yanı sıra, patent duktus arteriyozusa (PDA) bağımlı olmayan daha hafif KKH formları da yer alır. KKKH, tüm KKH'ların yaklaşık %25'ini oluşturur.

NOT'da Hedeflenen Lezyonlar:

- (A) İlk yaşta müdahale gerektiren lezyonlar
- (B) Genellikle bir süreliğine veya sürekli hipoksemi ile seyreden defekler (8,9).
 - Hipoplastik sol kalp sendromu
 - Ventriküler septum bütünlüğü korunmuş pulmoner atrezi
 - Ventriküler septal defektli pulmoner atrezi
 - Fallot tetralojisi
 - Total anormal pulmoner venöz dönüş
 - Büyük arterlerin transpozisyonu

¹ Uzm. Dr., İzmir Bakırçay Üniversitesi, Çiğli Eğitim ve Araştırma Hastanesi, Pediatri Departmanı, Neonatoloji AD, e-mail: ozdogarbatuhan@gmail.com, ORCID iD: 0000-0003-3307-2863

- Sağlık hizmeti sağlayıcılarının ve ailelerin eğitimi: Personel ve aileler için eğitim materyalinin geliştirilmesi.
- Tarama sonucunun, diğer tarama testleri (örneğin; fetal ultrason), kardiyak olmayan durumlar, ekipman kalitesi, eğitim çabaları dahil tarama maliyeti ve geri ödeme bağlamında sürekli olarak değerlendirilmesi.
- KKKH taramasının uygulanması ülkeden ülkeye ve aynı ülke içinde farklı coğrafik bölgelerde değişiklik gösterir. Klinisyenler, uygulama alanları için uygun algoritma ve protokollerini belirlemek için yerel halk sağlığı kurumlarının önergelerine başvurmalıdır.
