Foreword

Cardiac Surgery is being carried out in many centers with the increase of technology and experience. Anesthesia management also differs from other areas of anesthesia in cardiovascular surgery in which cardiopulmonary bypass is used. These differences include stopping and restarting the heart and stopping ventilation. These applications should be easy to learn. Our aim was to create a book for all physicians and medical personnel working in this field, including anesthesia technicians and perfusionists, while preparing the Cardiovascular Surgery and Anesthesia Management book. It would make us happy to see that our goal was fulfilled. In spite of all our efforts, due to mistakes that have been overlooked, we seek tolerance of readers. We would like to thank our colleagues who contributed to the preparation of the book and the Academician Publishing House.
