PREFACE

Based in Ankara in Turkey, the independent academic publisher, Akademisyen Publishing House, has been publishing books for almost 30 years. As the directors of Akademisyen Publishing House, we are proud to publish more than 3400 books across disciplines so far, especially in Health Sciences. We also publish books in Social Sciences, Educational Sciences, Physical Sciences, and also books on cultural and artistic topics.

Akademisyen Publishing House has recently commenced the process of publishing books in the international arena with the “Scientific Research Book” series in Turkish and English. The publication process of the books, which is expected to take place in March and September every year, will continue with thematic subtitles across disciplines

The books, which are considered as permanent documents of scientific and intellectual studies, are the witnesses of hundreds of years as an information recording platform. As Akademisyen Publishing House, we are strongly committed to working with a professional team. We understand the expectations of the authors, and we tailor our publishing services to meet their needs. We promise each author for the widest distribution of the books that we publish.

We thank all of the authors with whom we collaborated to publish their books across disciplines.

Chapter 1

VERSATILE PERSPECTIVES OF UNIVERSITY STUDENTS REGARDING DISTANCE EDUCATION: BINGOL UNIVERSITY EXAMPLE

Nesip DEMİRBİLEK¹

INTRODUCTION

Distance education is a system in which trainers and learners are in various places and conduct education and training activities with communication technologies (İşman, 2008). According to the California Distance Learning Project (CDLP), “The distance education program is a system that provides education by establishing a connection between the student and educational resources.” Distance education is an open and blended learning environment in which pedagogical tools are used, activated by internet and web technologies, and facilitated by meaningful activities and interactions (Dabbagh & Bannan-Ritland, 2005).

In the European Union’s definition of distance education, it is stated that internet and web technologies positively affect the quality of education. (Düzakın & Yalçinkaya, 2008). However, students’ perceptions of distance education may differ individually. The fact that these perceptions are positive or negative can directly or indirectly affect all stakeholders in the education system, learning environments, learning-teaching processes, students’ education life, and motivation.

Positive Aspects of Distance Education

Distance education systems have many advantages and can reach even large audiences. In distance education, which is primarily student-centered, the responsibility for learning is left to the student rather than the teacher (Aldemir, 2020; Deveci, 2019; Mitchell, Chen & Macredie, 2005). This education system is an application that allows each student to progress at their own learning pace (Gökçe, 2008; Kaya, 2002). Distance education allows a large audience to receive their necessary education simultaneously (synchronously) or separately (asynchronously), thus reducing the learning distance (Dinçer, 2006). In this

¹ Assist. Prof. Dr., Bingöl University, ndemirbilek@bingol.edu.tr, ORCID iD: 0000-0001-5133-7111

cost of education, and no financial problems. Distance education is economical (Salleh et al., 2020). Transportation costs and time used for transportation are eliminated since there is no need for any means of transportation to go to the university in the distance education process (Djalilova, 2020).

Data availability Data sharing for this study is not applicable as no datasets were generated.

Chapter 2

MOTIVATION, SELF-DETERMINATION AND EDUCATION

Perihan Ceyda ORHAN¹
Öner USLU²

1.MOTIVATION

Motivation has been defined in various ways within the literature. The etymological origin of motivation can be traced back to the medieval Latin word ‘*motivus*’ meaning ‘*to move*’ or ‘*to act*’. By the 15th century, motivation had evolved to denote a mental state that drives a person to act (*Motivation | Search Online Etymology Dictionary*, n.d.). Contemporary definitions align with this interpretation (Ertürk, 2017; Şahin, 2004). According to the definitions, although the contexts in which events are processed vary, motivation can be considered the decision threshold that an individual crosses to exhibit a behavior. This transition point can take many forms, change over time, and transform for different reasons. In this context, motivation includes various internal and external reasons and their functioning mechanisms that drive individuals to behave, determine the intensity and energy level of these behaviors, give a specific direction to behaviors and ensure their continuation (Gökçe et al., 2010; Schunk, 2015).

Motivation is considered a complex phenomenon that involves elements initiating action and helping determine direction of the action in individuals. As aforementioned, motivation has various functions such as initiating behaviors, determining the energy and intensity level of behaviors, determining the direction of behaviors and ensuring the continuation of behaviors (Didem Paşalıoğlu, Tokgöz, Şakar, Özler, & Özal, 2013). One of the most significant aspects of motivation is that personality structures, desires, needs, and morale differ among individuals. For this reason, motivating and engaging everyone simultaneously is highly challenging. Moreover, it is not only impossible to encourage everyone to use the same words, incentives, or rewards, but it is also impossible to motivate

¹ Science Expert, Turkish American Association (TAA), perihanceydaorhan@gmail.com, ORCID iD: 0000-0002-4425-231X

² Assoc. Prof. Dr., Ege University, oner.uslu@ege.edu.tr, ORCID iD: 0000-0001-8891-3119

have consequences accordingly. De Charms (1968) argues that the basic desire to control one's destiny is the central force in intrinsically motivated behavior, and it is a contributing factor to all motivated behavior.

Within Self-Determination Theory, an important idea is that active tendencies toward intrinsic motivation, internalization, and integrated regulation are accompanied by certain inherent satisfactions and, in fact, are rooted in them. The theory assumes that individuals experience satisfaction in competence, autonomy, and relatedness as fundamental aspects of these pursuits. These proximal satisfactions, at their core, reflect the essence of human flourishing and predict numerous indicators of health and vitality. Moreover, research in Self-Determination Theory highlights that social environments that support these psychological satisfactions foster human curiosity, creativity, productivity, and compassion. Whereas individuals living in need-blocking environments, such as contexts that are overly controlling, rejecting, critical, inhibit autonomy, relatedness, and competence needs and these individuals may become defensive, amotivated, aggressive, and antisocial (Ryan & Deci, 2017). In such an educational environment, it would be difficult to expect students to have high academic motivation and motivation towards their professions. Therefore, understanding and applying the principles of this theory is essential for fostering optimal motivation and well-being.

Chapter 3

COMPARATIVE STUDY OF THE 2024 PRIMARY SCHOOL TURKISH COURSE CURRICULUM AND THE 2024 PRIMARY SCHOOL GERMAN COURSE CURRICULUM OF THE GERMANY LOWER SAXONIA (NIEDERSACHSEN) STATE BASED ON THE 4TH GRADE LEVEL

Begüm Sultan ÜNSAL¹

INTRODUCTION

Since the emergence of humanity, individuals have sought to acquire the necessary skills to sustain their existence, enhance their prosperity, fulfill their intellectual curiosity, and attain knowledge from diverse perspectives. Throughout history, the evolving demands of both society and the individual have led to significant transformations in educational objectives and methodologies. Initially, education primarily occurred in informal settings without structured plans or programs; however, this paradigm was supplanted by formalized educational environments, established institutions, and qualified professionals dedicated to the provision of education.

Education was known in a very comprehensive way, from the moment a person is born to the moment he dies. According to Dewey, education is a process of living, a continuous structuring of experiences. It encompasses all the changes that occur in an individual's behavior based on what is learned in life, both inside and outside formal and non-formal education programs. This includes, for instance, observing how trees blossom, applying four operations skills, developing responsibility for the environment, and respecting family elders (Selvi, 2020). Some fundamental issues related to education often lack attention in everyday life. These can be summarized in terms of values, attitudes, goals, and approaches. They influence the kind of society we inhabit and our future. The values, goals, attitudes, and approaches that individuals have or should cultivate to mature and develop are expected to shape education and impact the future of society. These

¹ Lecturer, Trabzon University, begumsultanunsal@trabzon.edu.tr, ORCID iD: 0000-0003-2883-8326

The German curriculum is fundamentally grounded in a constructivist pedagogical framework. This program is meticulously designed to facilitate substantial advancements in students' language proficiency. Through active engagement in diverse language activities—such as reading, listening, speaking, writing, and media communication—and reflective practices pertaining to linguistic interaction within a multilingual context, students cultivate essential comprehension and communication competencies. These skills empower them to navigate and interpret their environment effectively while establishing a foundation for their beliefs and values within a democratic society. Consequently, the German curriculum plays a pivotal role in addressing personal and societal issues. Students are expected to employ the language autonomously, creatively, and proficiently.

Chapter 4

READING STRATEGIES AND METACOGNITIVE DIMENSION IN READING SKILLS

Ayhan DÖNMEZ¹

INTRODUCTION

Reading proficiency, recognized as one of the fundamental language skills, encompasses a sequential cognitive process. This process initially involves the encoding of letters into mental memory, followed by the synthesis of these letters to construct words, and ultimately, the recognition of meaningful word clusters through the integration of these words (Maviş, 2002). Uluğ (1993) posits that reading entails the analysis and comprehension of textual material for the purpose of acquiring knowledge on a specific subject, a process that may also encompass the auditory verbalization of the text. Furthermore, Akyol (2005) characterizes reading as the construction of meaning facilitated by effective communication between the author and the reader, conducted within a structured milieu according to designated methodologies and objectives.

Key attributes of an adept reader include the capacity to discern the meanings of idioms, sentences, paragraphs, and the overarching text, progressing hierarchically from smaller components to larger contexts. This understanding necessitates the ability to establish connections between distinct sections and the entire composition when appropriate. Moreover, it is imperative for the reader to correlate graphic symbols—specifically, written language—with their corresponding meanings. This ability is essential for evaluating the text and grasping the author's intent and emotional undertones. Additionally, a reader's aptitude to actively engage with the ideas presented in the text, linking them with prior experiences, significantly enhances the effectiveness and efficiency of the reading process (Yilmaz, 2008). Consequently, reading skills embody a vocalization task rooted in symbolism, while also encompassing a multifaceted undertaking that demands the reader's engagement with various responsibilities.

¹ Dr., ayhandonmez1903@gmail.com, ORCID iD: 0000-0003-1499-319X

- **Strategic Reading Education:** To help students gain conscious reading habits, metacognitive reading strategies should be taught, and these strategies should be encouraged.
- **Monitoring the Reading Process:** Guidance activities should be conducted for students to plan their reading, evaluate their progress, and analyze their learning processes.
- **Interactive and Applied Reading Activities:** Discussion groups, text analyses, and critical thinking-focused activities should be organized to increase active participation in the reading process.
- **Different Types of Feedback:** Students should be provided with opportunities to improve their reading processes through different types of feedback, such as teacher, peer, and self-assessment.
- **Strengthening Self-Regulation Skills:** For students to develop their skills in managing the reading process, cognitive awareness should be increased.

Chapter 5

EFL STUDENTS' PERCEPTIONS OF ENGLISH LESSONS THROUGH METAPHORS*

Berna GÖK¹
Ebru ŞİRE KAYA²

1. INTRODUCTION

In our age, where global communication accelerates with the influence of technology, it is obvious how necessary it is to know a foreign language. Learning a language is essential to opening up to the outside world personally and professionally. Through language, individuals can get to know different cultures and enrich their knowledge, and they can also transfer this knowledge and experience to future generations. In addition to serving as a means of communication and thought between individuals, language is also a mirror of cultures (Aksan, 1998).

In Turkey, teaching English started from the 4th grade of primary school in 1997 and from the 2nd grade of primary school in 2012, and continues throughout secondary school, high school, and university education. In addition to English, education in different foreign languages, especially German and French, is also provided, depending on the characteristics and quality of the schools. In Turkey, the importance of knowing a foreign language has long been accepted by the public and the state, and extensive efforts have been made in teaching foreign languages (Sebüktekin, 1983). Although resources, books, documents, and equipment are quite diverse and accessible in language learning thanks to today's computer technology, Turkey has unfortunately not reached a sufficient level in terms of knowing foreign languages in both national and international foreign language proficiency rankings. Demirel (1999) emphasizes the importance of the following principles regarding foreign language education:

1. Functional integrity of listening, speaking, reading and writing skills,
2. Using visual and auditory tools,

* This chapter is produced from the Master Thesis titled "Identifying Metaphoric Perceptions of Secondary School Students towards English Lessons" conducted at Çukurova University, Türkiye.

¹ Master Student, Çukurova University, bernaturk35@gmail.com, ORCID iD: 0009-0008-1838-3608

² Assist. Prof. Dr., Çukurova University, ebrusire@cu.edu.tr, ORCID iD: 0000-0002-7358-2211

the concept of metaphor. In such studies the participants could be given a kind of briefing session about how to produce effective metaphors as one part of the study. Finally, the study focused on the perceptions of EFL students on metaphors. In another study, the perspectives of EFL teachers could be investigated in relation to different dimensions of metaphor teaching.
